- G-Sensor, remote emergency recording, audio, loop recording, zoom to read license plates
- Easy installation, auto shut off, maintenance free fleet grade design and quality

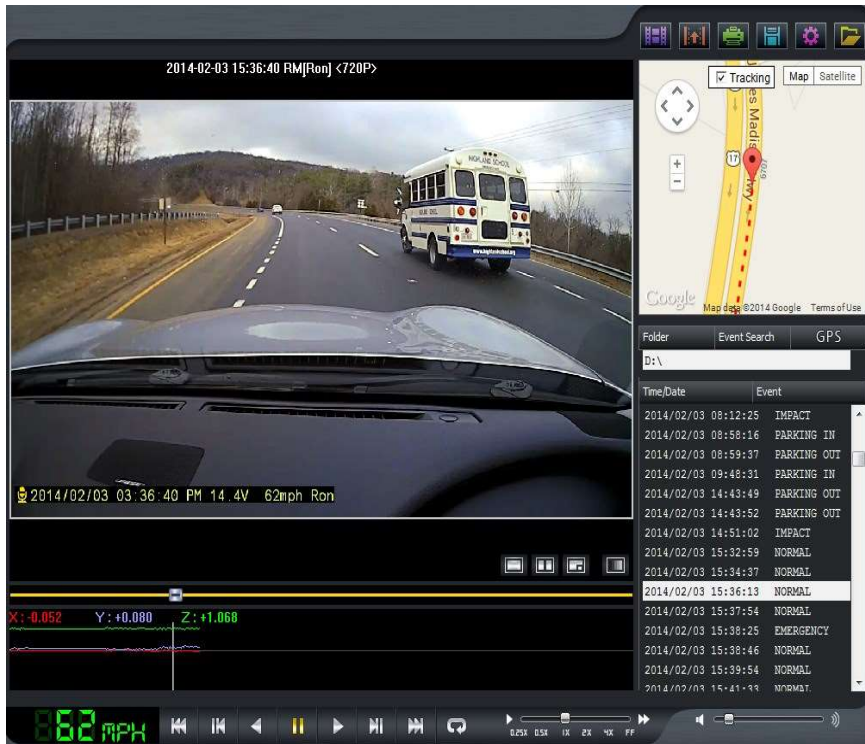

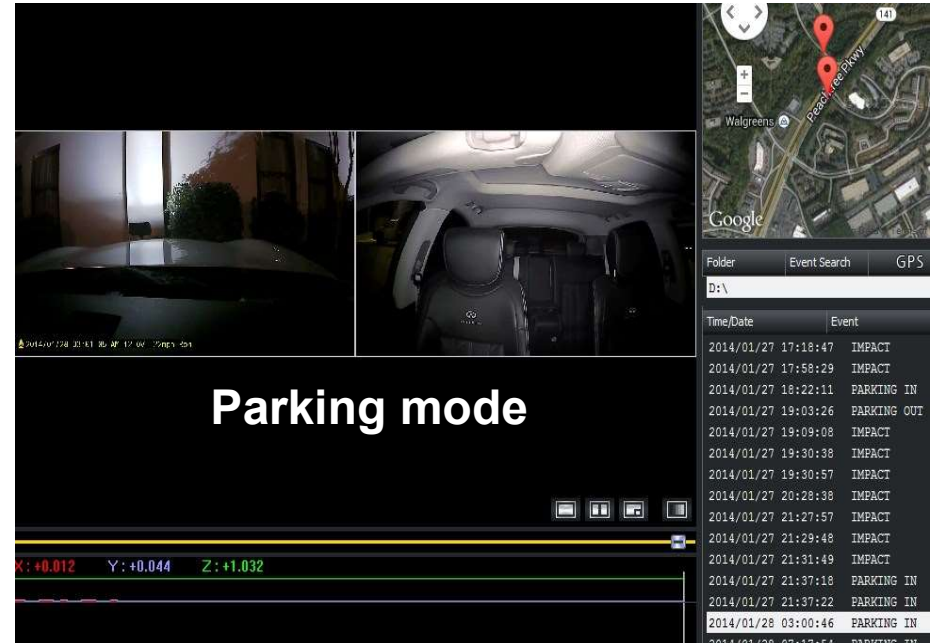

HD3

- Transfer one image per event through Wi-Fi to PC server.

If you're a commercial fleet manager that wants to reduce risk, enforce company policy and protect your fleet from false claims, the HD3 is the answer. The HD3 provides built-in GPS and Wi-Fi modules. The HD3 is a single unit camera with dual lens that installs in most vehicles in less than an hour. The camera offers many features that will ensure HD quality audio and video recordings, which include WDR (Wide Dynamic Range) an imaging system that records greater scenic details, 10 bright LEDs provide amazing clarity at night and voice guidance to inform drivers the condition of the camera.

Additional features include a tamperproof SD card slot and wifi solution with no monthly cost to seamlessly receive all you driver events wirelessly. Our built in GPS function allows users to follow vehicle history via Goggle maps. This can help with more efficient routing and be used as a driver training tool without the monthly cost of real time GPS systems. Users also receive vehicle speed data and critical events such as harsh braking or acceleration. The emergency button can be installed as a panic device to lock down footage for viewing.
